Chapter 1

INTRODUCTION AND BACKGROUND OF THE STUDY

1.1 Introduction

In today's digital age, educational institutions are continually seeking innovative ways to enhance student success and foster community interaction. Asiatech College of Sta. Rosa recognizes the significance of leveraging technology to create a dynamic and inclusive learning environment. This capstone research endeavors to explore the development of a comprehensive web-based portal tailored to the specific needs of Asiatech College, aimed at empowering students, faculty, and the broader community.

This project addresses the growing demand for accessible and centralized information, streamlined communication channels, and collaborative tools within the college ecosystem. By embracing digital solutions, Asiatech College endeavors to optimize administrative processes, enrich academic experiences, and strengthen stakeholder connections.

Through this research, key considerations such as user experience design, technological infrastructure, security protocols, and scalability will be thoroughly examined. Moreover, the implementation of feedback mechanisms and continuous improvement strategies will ensure the portal remains responsive to evolving needs and preferences.

By embarking on this initiative, Asiatech College seeks to not only adapt to the digital landscape but also to lead the way in redefining the modern educational experience.

This capstone research endeavors to shed light on the process of conceptualizing, developing, and implementing a web-based portal as a catalyst for student success and community engagement within the context of Asiatech College of Sta. Rosa.

1.2 Background of the Study

In today's rapidly evolving educational landscape, the integration of digital technologies has become imperative for academic institutions striving to meet the diverse needs of their stakeholders. Asiatech College of Sta. Rosa stands at the intersection of tradition and innovation, recognizing the transformative potential of technology in enhancing student success and fostering community interaction.

With the proliferation of smartphones, tablets, and laptops, students increasingly expect seamless access to information and resources at their fingertips. However, the traditional methods of disseminating information through bulletin boards, flyers, and manual processes no longer suffice to meet the demands of a tech-savvy generation. Asiatech College recognizes the need to embrace digitalization to better serve its students, faculty, staff, and the wider community.

Moreover, the COVID-19 pandemic has underscored the importance of digital platforms for remote learning, communication, and collaboration. Asiatech College, like many educational institutions, faced unprecedented challenges in transitioning to online modes of instruction and administration. This experience

has highlighted the critical role of technology in ensuring continuity of education and maintaining connections within the college community, irrespective of physical barriers.

Against this backdrop, developing a comprehensive web-based portal emerges as a strategic imperative for Asiatech College. Such a portal would serve as a centralized hub for accessing academic resources, course materials, administrative services, and community engagement initiatives. By consolidating disparate systems and information channels into a single digital platform, Asiatech College aims to enhance operational efficiency, promote student engagement, and strengthen stakeholder relationships.

Furthermore, the web-based portal presents an opportunity to cultivate a sense of belonging and inclusion among students by facilitating peer interaction, collaboration on projects, and participation in extracurricular activities. Additionally, it offers avenues for faculty members to disseminate knowledge, communicate with students, and administer assessments in a more interactive and personalized manner.

Through this capstone study, the aim is to delve into the conceptualization, design, development, and implementation phases of the web-based portal for Asiatech College of Sta. Rosa. By understanding the unique needs, challenges, and aspirations of the college community, this research endeavors to lay the foundation for a transformative digital infrastructure that fosters student success and community interaction in the digital age.

1.3 Statement of the Problem

1.3.1 General Problem

Asiatech College of Sta. Rosa acknowledges the critical role of digital technologies in augmenting student success and cultivating a thriving community

atmosphere. Yet, the current absence of a tailored, all-encompassing web-based portal presents significant hurdles. Moreover, students face obstacles in accessing essential information dispersed across numerous Facebook pages associated with the institution. This fragmentation intensifies the challenge of maintaining effective communication and cohesive engagement among stakeholders.

1.3.2 Specific Problem

1. The lack of a centralized and comprehensive web-based portal specifically designed for Asiatech College of Sta. Rosa impedes efficient access to vital information and inhibits effective communication and engagement among students, faculty, staff, and the wider community.

2. The production of multiple Facebook pages associated with the school further complicates information dissemination, intensifying the challenge of fostering unified community interaction and supporting student success.

3. The absence of a dedicated online platform for collaborative learning, resource sharing, and community engagement hinders the college's ability to fully leverage digital tools and technologies to enhance student success and foster a sense of belonging among stakeholders.

1.4 Objectives of the Study

1.4.1 General Objective

The objective of this study is to develop and implement a comprehensive web-based portal specifically designed for Asiatech College of Sta. Rosa. This portal aims to address the challenges posed by the fragmentation of information across multiple Facebook pages and the absence of a centralized platform. The study seeks to enhance communication, streamline access to essential

information, and foster cohesive engagement among students, faculty, staff, and the broader community. By achieving these objectives, the study aims to contribute to the enhancement of student success and the cultivation of a thriving community atmosphere within the institution.

1.4.2 Specific Objective

1. Develop a centralized and comprehensive web-based portal tailored specifically for Asiatech College of Sta. Rosa to facilitate efficient access to vital information and promote effective communication and engagement among students, faculty, staff, and the wider community.

2. Consolidate and streamline information dissemination by addressing the issue of multiple Facebook pages associated with the school,

   aiming to create a unified online presence that fosters cohesive community interaction and supports student success.

3. Create a dedicated online platform designed for collaborative learning, resource sharing, and community engagement within Asiatech College of Sta. Rosa, leverages digital tools and technologies to enhance student success and cultivate a sense of belonging among stakeholders by using a chatbot.

1.5 Scope and Delimitations

1.5.1 Scope

The scope of this study is extensive, encompassing the development and implementation of a comprehensive web-based portal explicitly tailored to meet the needs of Asiatech College of Sta. Rosa. This endeavor begins with a thorough assessment of the college's existing information dissemination practices and communication channels, followed by the identification of specific information needs and communication preferences of students, faculty, staff, and the wider

community. The core focus lies in the design and development of a user-friendly web portal that serves as a centralized hub for accessing vital information, resources, and services pertinent to the college community. Additionally, the study addresses the challenge posed by multiple Facebook pages associated with the institution by integrating relevant content and functionalities into the web-based portal.

Moreover, mechanisms for facilitating collaborative learning, resource sharing, and community engagement within the portal will be implemented to enhance interaction among stakeholders. Pilot testing and feedback collection from stakeholders will be conducted to evaluate the functionality, usability, and effectiveness of the web-based portal. Subsequently, training and support programs will be provided to users to

ensure maximum utilization and derive optimal benefits from the portal's features.

Furthermore, the study aims to evaluate the impact of the web-based portal on enhancing student success, promoting community interaction, and fostering a sense of belonging among stakeholders within Asiatech College of Sta. Rosa. Through a structured approach focusing on the identified challenges outlined in the problem statement, the study endeavors to offer practical solutions aimed at improving communication, facilitating access to information, and enhancing engagement within the college community.

1.5.2 Delimitations

This study is delimited in several key aspects. Firstly, it focuses solely on Asiatech College of Sta. Rosa, excluding other educational institutions or geographical regions from its scope. Secondly, the development and implementation of the web-based portal will be confined to a specific timeframe determined by the duration of the study, with

long-term sustainability and maintenance falling outside the study's horizon. Additionally, the study will not include features such as SMS notification or mobile notification to notify students.

Furthermore, the findings and recommendations may not be directly applicable to other educational institutions or contexts, given the unique circumstances of Asiatech College of Sta. Rosa. External factors such as changes in technology or socio-economic conditions could also influence the portal's effectiveness, beyond the study's control. Ethical considerations, including data privacy and confidentiality, will be strictly adhered to, potentially limiting certain aspects of data collection and analysis. Despite these delimitations, the study aims to offer valuable insights and practical solutions to enhance communication, information access, and engagement within Asiatech College of Sta. Rosa through the development and implementation of the web-based portal.

1.6 Conceptual Framework

The current study follows an input, process, and output framework to create an online repository containing essential links pertinent to the Asia Technological School of Science and Arts Institution.

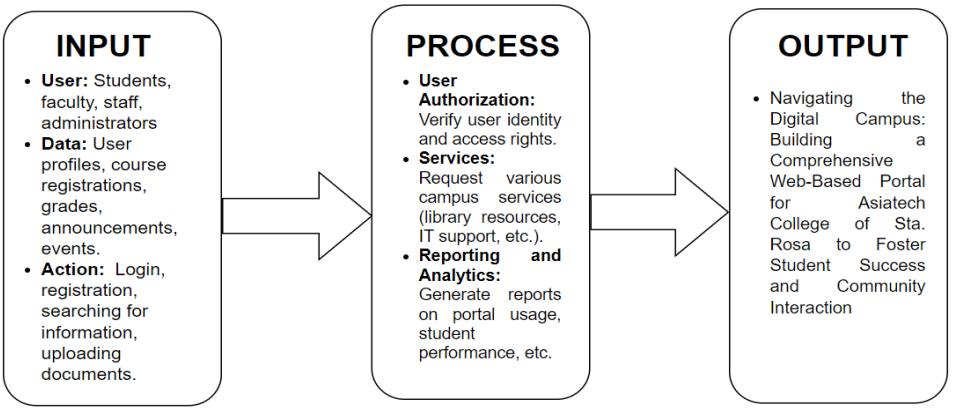

Figure 1. Conceptual Framework

In this framework, the input phase involves gathering requirements and identifying the critical links and information for students, faculty, and staff. This stage encompasses conducting needs assessments, surveys, and interviews to understand the diverse information needs and preferences of stakeholders.

The portal is designed to foster student and faculty interaction and community.

The inputs to the system are users (students, faculty, staff, and administrators), data (user profiles, course registrations, grades, announcements, and events), and actions (login, registration, searching for information, and uploading documents).

The processes verify user identity and access rights, request various campus services (library resources, IT support, etc.), and generate reports on portal usage, student performance, etc.

The outputs of the system are authorization (access to the digital campus), services (such as library resources and IT support), and reporting analytics (reports on portal usage and student performance).

In essence, the digital campus portal is a system that allows users to access information and services online. The system verifies user identity and access rights, and then provides users with the information and services they need. The system also generates reports on portal usage and student performance.

1.7 Significance of the Study

The significance of the study "Navigating the Digital Campus: Building a Comprehensive Web-Based Portal for Asiatech College of Sta. Rosa to Foster Student Success and Community Interaction" is profound and wide-reaching. By developing a comprehensive web-based portal tailored to the specific needs of Asiatech College, the study aims to enhance communication channels and centralize access to vital information, resources, and services for students, faculty, staff, and the wider community.

This initiative not only improves transparency and efficiency within the college but also empowers students to better manage their academic endeavors, leading to improved learning outcomes and overall student success. Moreover, the portal serves as a hub for community engagement, enabling collaboration, networking, and participation in extracurricular activities and events, thus fostering a vibrant college community.

The centralized platform enhances operational efficiency and productivity for faculty and staff, allowing them to focus more on teaching, research, and student support. Additionally, the development of the web-based portal aligns with the increasing the importance of digital learning environments, ensuring Asiatech College's adaptability to evolving educational trends and scenarios. Ultimately, this initiative positions Asiatech College as a leader in innovation,

student-centeredness, and academic excellence, enhancing its reputation and competitiveness within the educational landscape.

1.8 Definition of Terms:

To facilitate the understanding of this study, different terms are defined herein:

1.8.1 Technical Terms

It refers to specialized language and vocabulary used within a particular field of study. It encompasses terms, jargon, acronyms, and concepts that are specific to that discipline or area of research.

ACCESSIBILITY COMPLIANCE: Ensures the portal is accessible for students with disabilities following WCAG (Web Content Accessibility Guidelines) standards.

ASYNCHRONOUS COMMUNICATION TOOLS: Allows students to connect and collaborate regardless of their schedules (e.g., discussion forums, chat rooms).

CLOUD-BASED INFRASTRUCTURE: Utilizes cloud storage and computing for scalability, reliability, and disaster recovery.

CONTENT MANAGEMENT SYSTEM (CMS): This facilitates easy updating and management of the portal's content by authorized personnel.

DATA ANALYTICS & REPORTING: Tracks user behavior and portal usage to inform future development and optimize student experience.

LEARNING MANAGEMENT SYSTEM (LMS) INTEGRATION: Seamless integration with existing LMS allows access to course materials and grades within the portal.

PUSH NOTIFICATIONS: Enables targeted messaging to students about important announcements, deadlines, or events.

RESPONSIVE DESIGN: Ensures the portal displays optimally on various devices (desktops, tablets, phones).

SINGLE SIGN-ON (SSO): This refers to a system where students can access all the portal's features with one login credential.

SOCIAL LEARNING PLATFORM (SLP): Features that enable discussions, group projects, and peer-to-peer interaction within the portal.

1.8.2 Operational Terms

Operational terms refer to the specific definitions and procedures used to measure or manipulate variables in a study. These terms translate abstract concepts or constructs into observable and measurable actions or events, allowing researchers to operationalize their hypotheses and research questions.

GOOGLE FORM: a tool within Google Drive for creating online survey forms. It is not as feature-rich as Qualtrics, but it does support basic data validation, basic skip logic, and a range of question types.

INTERVIEW: a qualitative research technique that involves asking open-ended questions to converse with respondents and collect elicit data about a subject.

ISO 25010: Systems and software Quality Requirements and Evaluation (SQuaRE) – System and software quality models", is a software quality standard. It describes the models, consisting of characteristics and sub-characteristics, for both software product quality, and software quality in use together with practical guidance on the use of the quality models.

KANBAN METHODOLOGY: is an agile project management tool designed to help visualize work, limit work-in-progress, and maximize efficiency (or flow). It can help both agile and DevOps teams establish order in their daily work.

LIKERT'S SCALE: a type of rating scale, often found on survey forms or questionnaires, that measures how people feel and levels of agreement which can be useful in many different situations.

QUESTIONNAIRES: is a research instrument that consists of a set of questions to collect information from a respondent.

STATISTICAL TREATMENT DATA: is taking raw data and turning it into something that can be interpreted and used to make decisions. This process is important for businesses because it allows them to take customer feedback and turn it into actionable insights.

STRATIFIED SAMPLING: Researchers rely on stratified sampling when a population's characteristics are diverse and they want to ensure that every characteristic is properly represented in the sample. This helps

with the generalizability and validity of the study, as well as avoiding research biases like undercoverage bias.

SURVEY: is a research method used for collecting data from a pre-defined group of respondents to gain information and insights on various topics of interest.

WEIGHTED MEAN: is an average computed by giving different weights to some of the individual values. If all the weights are equal, then the weighted mean is the same as the arithmetic mean. It represents the average of a given data. The Weighted mean is similar to the arithmetic mean or sample mean.

Chapter II

REVIEW OF RELATED STUDIES AND LITERATURE

This section compiles data sourced from books, publications, handouts, and the internet, serving as foundational knowledge for developers to strategize and execute the project. Additionally, it discusses both external and local studies to enrich the understanding and insights relevant to the task at hand.

2.1 Related Studies

2.1.1 Foreign Studies

According to the researchers Williams and Davis et.al (2021) conducted a longitudinal study to explore the impact of digital campus initiatives on student success metrics, providing valuable insights into the effectiveness

of web-based portals and online resources in supporting student learning and engagement.

The researchers Anshu Gupta, Harsh Vardhan, Sakshee Varshney, Shivi Saxena, Sandhya Singh and Nidhi Agarwal et.al (2023), The design and creation of a web gateway to improve cooperation and communication among campus communities are discussed in this essay. The portal is designed to be flexible and adaptive to various user groups and their unique requirements. The writers discuss the numerous features and functionalities integrated into the portal as well as the user-centered design methodology they utilized to construct it. The site has resources for resource management, event planning, group communication, and information exchange. The writers also go through the difficulties that were experienced during creation and make suggestions for future advancements. Overall, the online portal offers a useful setting for campus communities to communicate and work together. As we all know, the pandemic has brought a huge change in everyone's life, and working from home has become THE NEW NORMA, its drawback is the lack of

interaction among peers. This hinders the flow of information in the hierarchy. To cope with this problem, we have come up with a solution "KCONNECT" that aspires to bridge the communication gap. KConnect is a networking platform that will help students to connect and gain relevant knowledge about new opportunities regarding careers, scholarships, club activities, and higher studies. The results of the study show the implementation of a web portal as an effective way to allow students to increase connections and stay updated.

The researchers Martinez and Thompson et.al (2020) conducted a comparative analysis of community engagement strategies in online learning environments, highlighting the importance of digital platforms,

social media integration, and collaborative tools in promoting interaction among students, faculty, and staff.

According to the scholars Garcia and Patel et.al (2022) shared insights from a case study on designing a user-centric web-based portal for higher education institutions, offering valuable lessons learned and best practices for creating comprehensive online platforms tailored to diverse stakeholder needs.

According to the researchers' MA Mac Iver, K Wills, S Sheldon, E Clark et. al (2021), based on qualitative field note data from a larger four-year study of a continuous improvement initiative focused on improving family engagement during the transition from middle grades to high school identifies both the challenges families face in using the online parent portal and the challenges school leaders face in ensuring that a portal is a useful tool to families and communicating information to families about using the portal effectively. This article suggests the need for district leaders, principals, teachers, and other school staff to reflect systematically on the design and purposes of a parent portal, and ways to make the portal a useful tool for families to monitor students' academic progress and help

to improve students' grades. It also provides recommendations for how school leaders can apply a continuous improvement approach to increase the number of families that access the portal regularly.

Additionally, Brown and Wilson et.al (2020) conducted a meta-analysis of research findings on digital campus initiatives, identifying common themes and trends in the design and implementation of web-based portals, online resources, and digital learning environments. These studies provide recent and relevant insights that can inform the development and implementation of a comprehensive web-based portal for Asiatech College of Sta. Rosa aligns with the objectives of the study.

As stated in the study by Frank J., et al (2021). College students doing well depends on them being able to get online resources and help from the library. This became even more important in March 2020 when many schools went online because of COVID-19. But this switch to online learning showed a big problem in Montana, a rural state in the west. Many students there didn't have computers, tablets, or phones with internet, or even good internet service. This lack of access makes it hard for students to succeed in online learning. This article talks about how this hurts students and how librarians at Montana State University are trying to fix the problem and make sure everyone has equal access to online resources. The article covers different things that affect how well students can get to these resources, including whether they have their own devices, internet access, and if the library can be reached remotely. It also talks about how different librarians working in various areas are working together to make sure everyone can use the library's resources easily.

According to Tanaka, K., et. al (2021), Planning a great course is only half the battle. Once you're in the classroom, those big ideas can bump up against real-world limitations. Teachers who use primary sources in their lessons shared some common challenges. First, they worried about

whether different formats (like documents vs. photos) and classroom layouts made it easier or harder for students to participate. Second, they thought a lot about separating the "how" from the "what" of the sources. They realized that different types of primary sources call for different teaching methods and goals. Finally, even though there are challenges, these teachers are excited about the possibilities of new tools and technology to improve how they use primary sources in the classroom.

In addition to the study from Goehausen, J., & Thomsen, S. L. (2024). Their study suggests that expensive housing makes college less affordable, especially for those starting out and in rural areas. This could slow down

growth in higher education and make it harder for universities to attract skilled workers to certain regions, increasing the gap between developed and underdeveloped areas.

Moreover, Yang T.-C., (2023). This study proposes a new way to assess digital competence: using artificial intelligence (AI) to analyze course descriptions (syllabi). This method is much faster and more consistent (over 80% accurate) than traditional methods, and it closely matches what human reviewers find (kappa > 0.6). Nowadays, universities care a lot about whether students have the digital skills they need to succeed. Traditionally, figuring this out involved students saying what they know (self-reporting) or teachers manually reviewing their work (questionnaires). These methods aren't very accurate. In short, this new method is fast, accurate, and reliable, making it a great tool for universities to see how well their students are prepared for the digital world. The study also discusses how this method could be used to improve digital skills programs at universities and the overall value this research brings to the field.

2.1.2 Local Studies

According to the study conducted by Saturnina L. Fabian-Nisperos from Mariano Marcos State University and Cecilia A. Mercado from Saint Louis University, the development of a university portal framework for Mariano Marcos State University (MMSU) was undertaken to address the challenges of information overload and facilitate efficient access to relevant resources and services for students, faculty, and staff. The framework was designed based on the standard requirements of a university portal, user needs analysis, and evaluation of the current

information system profile of MMSU. Through stakeholder engagement and prototype development, essential components and features of the portal were identified, paving the way for a standardized, user-centric, and cost-effective solution for information management in the university setting.

According to the study conducted by Elimae Mariz L. Dalangin et. al (2021) This paper aims to contribute to the improvement and strengthening of the alumni relations of the university through the assessment of alumni engagement as the institution's marketing strategy. Specifically, the objectives of the study are to determine the demographic profile of the respondents, to assess the level of alumni engagement to the alumni programs, to determine the marketing strategies provided to alumni, to test the significant difference between the respondent's demographic profile and the level of alumni engagement, to test the significant relationship between the level of alumni engagement and marketing strategies, to develop an action plan to improve alumni engagement.

According to a local study entitled ONLINE ACCREDITATION PORTAL OF NORTH LUZON PHILIPPINES STATE COLLEGE conducted by Jonathan F. Cenezan at North Luzon Philippines State College (now Ilocos

Sur Polytechnic State College – Main campus) in response to the challenges posed by the COVID-19 pandemic, the development and implementation of an Online Accreditation Portal emerged as a crucial solution. As higher education institutions were compelled to transition their operations online due to mobility restrictions, the need to pursue program accreditations persisted.

The study aimed to address this challenge by developing a secure and accessible online platform for storing accreditation-related data,

facilitating accreditation processes, and ensuring compliance with accreditation standards.

The study focused on analyzing the acceptability of the developed Online Accreditation Portal, evaluated by 16 respondents using the ISO/IEC 25010:2011 questionnaire. The results indicated a very high level of acceptability, with a mean rating of 4.42, suggesting the potential for the system's implementation in the institution's accreditation activities.

Furthermore, the study emphasized the benefits of virtual assessments and non-face-to-face modalities in accreditation processes, particularly amidst the pandemic. It underscored the importance of utilizing web-based platforms to ensure continuous quality assurance in education, aligning with the standards set by the Accrediting Agency of Chartered Colleges and Universities in the Philippines (AACCUP), Inc.

Considering the circumstances described above, the development and implementation of the Online Accreditation Portal for North Luzon Philippines State College emerged as an innovative solution to revolutionize the accreditation process. The portal serves as a centralized repository for accreditation-related data, providing a seamless and data-driven approach to accreditation that exceeds the demands of the modern educational landscape.

The study concluded that the developed NLPSC Accreditation Portal received favorable feedback from users, highlighting its potential for implementation within the institution. It recommended further development of features to enhance functionality and suggested technology transfer to other campuses of the institution to ensure standardized accreditation processes across all campuses.

According to the study conducted by Rochelle Dacuycuy-Pacio on the Online Student Information System of Benguet State University

(OSIS-BSU), there is a pressing need for an efficient record management and transaction processing system. The current semi-computer-based system and paper-based student information system at BSU are deemed inefficient and laborious by administrative and academic personnel due to the tedious process of searching and preparing reports on student information. Moreover, these systems are inconsistent with the university's main goals of promoting sustainable resource development and providing competent and effective services.

According to the study conducted by Francis F. Balahadia, Bernie S. Fabito, Ma. Corazon G. Fernando et.al (2016) The paper promotes the use of ICT for an E-Participation prototype for the Local Government Unit specifically at the Barangay level. E-Participation provides officials and the community interaction to produce information concerning policies and decision-making through technological tools. The study incorporates the different types of E-participation namely E-informing, E-Consulting, E-Involving, E-Collaborating, and E-Empowerment. The main feature of the system will focus on the application of Incident Mapping. Through this, citizens will be allowed to point to areas in the community through a digital map that requires attention from the barangay officials. Social media integration is also included to allow the community to receive notifications for every update done by the officials to the website. The paper will focus on the acceptability of the proposed system for Barangay

343 Zone 44 Sampaloc, Manila towards the implementation of the E-Participation Barangay Portal prototype. The system was accessed by the community having a total of 154 respondents using statistical sampling methods such as clustering, stratified, and fishball sampling. This study provides insight into potential improvements for transparency, communication plans, and services. Furthermore, the said innovation may encourage more users to improve fact-based decision-making for Local Government Units. Conducting e-participation in longitudinal research to

better understand the different factors affecting the sustainability of active participation is therefore recommended.

2.2 Related Literature

A. WVCST Grades and Accounts Inquiry

The Western Visayas College of Science and Technology (WVCST) Grades and Account Inquiry System was developed by their MIS Department to cater to students' inquiries on grades, accounts, and the latest information about the school. The system can be accessed on the designated area installed; it uses touchscreen technology where students will have to enter their id number to access the information**.** The system is installed locally within the school campus only.

B. University of San Agustin, Iloilo Management Information System

The Management Information System of the University of San Agustin has the following web-based online inquiry and assessment of fees. The students will provide their registration ID number to have access to the assessment of fees online. It also has Schedule Offerings where the student will select the name of their department to view the summary of subjects offered online. For the Grades inquiry, the student will provide their registration ID number to view online their subject list enrolled with corresponding grades. Lastly the account balance, the student will provide their registration ID number to get their current account balance online.

C. Literature Review on Web Portal for Engineering Admission Process

If a system is devised that can provide proper college information, then the number of students being admitted to the wrong colleges can be minimized and this system will also provide prediction for the next or future year cutoff list.

Education is indispensable for humans. Without education, one cannot survive in this world. Every year many students land up in the wrong colleges because of lack of information. If a system were devised that could provide them with proper college information, then several students being admitted to the wrong colleges can be minimized. This system will also provide predictions for the next or future year cutoff list.

D. The University Portal for Final Year Projects and the proposed I-Learn Portal

User Functions in the University Portal: Supervisor Allocation: Students can find their project supervisors, like how students in the I-Learn Portal can access their thesis advisors.

Communication: Both portals offer channels for students to interact with supervisors and coordinators, facilitating project discussions and feedback.

Document Management: Students can upload project reports, with the University Portal focusing on initial and final reports, and the I-Learn Portal centered on thesis archiving.

Clearance Process: The University Portal automates the clearance process, while the I-Learn Portal may offer similar features for tracking clearance requirements and generating clearance forms.

User Interactions in the I-Learn Portal:

Thesis Archiving: Students can upload and access their thesis documents, centralizing thesis management.

Supervisor Communication: Students can engage with supervisors for guidance and feedback on their research.

Document Submission: The portal enables students to submit project reports conveniently.

Clearance Tracking: Students can monitor their progress in meeting clearance requirements and obtain clearance forms upon completion.

D. Central Philippine University smart touch information kiosk with campus navigation

The proponents of the Central Philippine University Smart Touch Information Kiosk with Campus Navigation desired to enhance the enrolled college students at Central Philippine University to have fast and reliable access to important information.

The website is designed to be used by the administrator to manage the data of the smart touch information kiosk.

The smart touch kiosk will be used by students to view their grades, and university events, navigate the CPU campus, view the history of every college, and view the schedule of classes and major examinations.

Employing the Task-technology fit (TTF) theory of Goodhue and Thompson (1995) allows measures to address the issues of the system by using the eight factors of the theory for the study. This theory holds that IT is more likely to have a positive impact on individual performance and be used if the capabilities of the IT match the tasks that the user must perform.

The newly deployed system by the proponents can perform the following tasks: The admin can manage the adding, updating, and deleting of the class, exam, grades, events, enrolled students, and college history, and a kiosk built in coded campus mapping.

The project study recommends that future researchers who would do similar project studies improve and enhance this study.

2.2 Synthesis

The title "Navigating the Digital Campus: Building a Comprehensive Web-Based Portal for Asiatech College of Sta. Rosa to Foster Student Success and Community Interaction" encapsulates a multifaceted endeavor aimed at leveraging digital technologies to enhance educational experiences and community engagement within Asiatech College. Through the development and implementation of a comprehensive web-based portal, the study seeks to address various challenges, including fragmented information dissemination, limited stakeholder engagement, and the absence of a centralized platform. By concentrating exclusively on Asiatech College and its immediate community, the study ensures a tailored approach to meet specific needs and preferences. However, delimitations such as the exclusion of other educational institutions and the confinement to a specific timeframe underscore the study's focused scope. Despite these constraints, the study holds significant potential to drive positive outcomes, fostering student success and promoting a vibrant sense of community through enhanced communication, access to resources, and collaborative engagement facilitated by the digital portal. So, a need for user user-friendly, effective, efficient, and convenient systems that will overcome the problems outlined earlier. This paper addresses the problem outlined earlier by developing a final-year student project allocation, and management system where students can interact in real-time and can check for updated events and important announcements by the school. The system is developed using Hypertext Preprocessor (PHP) programming language, ASP.NET to develop Graphical User

Interface (GUI) and MySQL coupled with XAMPP for the database. The system is designed to run on the Windows operating system. The functionality of the system shows that it works satisfactorily. It will reduce the challenges, energy, and time required to look for any updated event of the school. (A. Adamu, 2020).

According to the Egyptian Journal (2022), In the era of communication technology and its integration with the learning process, the role of educational institutions has significantly changed, especially after the expansion of Internet

use and the rise of what's currently known as “Internet-based learning environments”. After the COVID-19 pandemic, researchers needed to search for alternatives to the traditional pedagogical approaches of map teaching to cultivate well-educated learners able to adapt to rapidly changing technology-enhanced learning. Hence, this study aims to develop the learning process in the Geography and Geographic Information Systems (GIS) departments in the faculties of Cairo University.

Mobile is everywhere, changing the way we work, play, socialize, and learn. Students nowadays are immersed in a digital culture driven by mobile consumer experiences across a range of devices, from wearable to phones, tablets, and virtual-reality platforms. Digital Campus is a website application that is in the University Tun Hussien Onn Pagoh Campus. The purpose of this website is to search all locations located in Pagoh Campus such as the laboratory, admin office, dean office, cafe, and classroom. The digital campus website is embedded with OpenStreetMap. It is open database licensing, and it is a collaborative mapping. This website is developed using Joomla 3.8.13 with PHP version 5.6.25. Digital campuses based on OpenStreetMap can help students, admin staff, lecturers, and visitors to find locations in a very easy way by using a digital platform. Thus, these application facilities can optimize administration work and promote university management to higher performance.

Chapter III

Research Methodology

This study aims to be a detective investigating the Comprehensive Web-Based Portal for ASIATECH impact. We’ll use surveys and interviews to gather clues from ASIATECH staff, CEITE students, and Faculty about their experiences with the platform. Website analytics will act as our digital fingerprint

scanner, revealing how students interact with the portal online. By combining these different investigative techniques, the researcher hopes to uncover the true story of the Web-Based Portal's significance for ASIATECH Students and its potential to revolutionize education at the Institution.

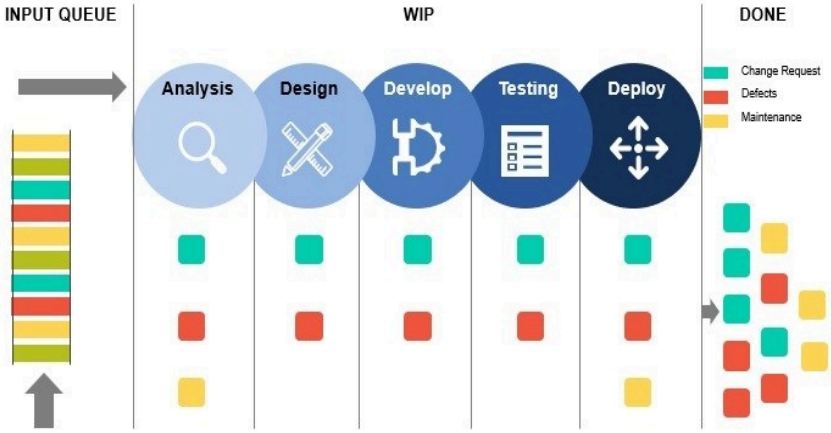

Figure 3.1.1

Kanban is a project management method that thrives on visualization and continuous improvement. Unlike setting deadlines, Kanban uses a Kanban board, essentially a visual to-do list, to track work stages. Tasks move across the board from "To Do" to "Done," showing progress in real-time. The key is limiting the number of tasks in progress (WIP) to avoid overwhelm and ensure a smooth flow of work. This transparency and focus on efficiency make Kanban valuable for software development and any team seeking an adaptable way to manage projects.

Kanban, an Agile project management method, emphasizes flexibility and continuous improvement. Here's a breakdown of its key components:

Backlog: This is a big bucket that holds all the potential tasks or user stories. Anyone involved in the project can add new ideas to this backlog.

Kanban Board: Imagine a giant to-do list! The Kanban board visually represents the workflow with columns (or lanes) showing different stages of work, like "To

Do," "In Progress," and "Done." Tasks move across these columns as they progress.

WIP Limits: Kanban focuses on avoiding bottlenecks. Each stage on the board has a WIP limit, restricting the number of tasks that can be in progress at once. This ensures smooth workflow and prevents teams from getting overwhelmed.

Continuous Releases: Unlike some Agile methods with set release cycles, Kanban promotes continuous releases. Completed tasks are released as soon as they're done, allowing for quicker delivery of value.

3.1 Research Method and Technique Used

The Web-Based Portal for ASIATECH staff, CEITE students, and faculty, this study will employ a mixed-method research approach. Quantitative data will be gathered through surveys distributed to a representative sample of students, capturing their usage patterns, satisfaction levels, and perceived impact of the portal on their academic endeavors. Qualitative insights will be gleaned through focus group discussions and interviews with students and faculty, exploring their lived experiences with the platform, its strengths and weaknesses, and its potential for enhancing learning and research within the Institution. Additionally, website analytics will be utilized to track user engagement and interaction patterns within the portal, providing objective data on the platform's accessibility and utilization trends. By triangulating these diverse data sources, the study aims to paint a comprehensive picture of the Web-Based Portal's impact on ASIATECH's educational ecosystem, revealing its potential to bridge knowledge gaps, empower students, and contribute to a more open and dynamic learning environment.

3.2 Research Design

This approach allows the researcher to weave together different strands of evidence to paint a holistic picture. The researcher can utilize quantitative methods like surveys and website analytics to measure usage patterns, user

satisfaction, and the portal's impact on academic outcomes. These provide objective data on how students interact with the platform and its tangible effects.

However, numbers alone don't tell the whole story. To understand students' lived experiences and perspectives, the researcher can employ qualitative methods like focus groups and interviews. These enable us to delve deeper into students' perceptions of the web-based Portal's strengths and weaknesses, how it influences their research and learning, and their suggestions for improvement.

Combining these quantitative and qualitative methods allows us to triangulate our findings, ensuring a more comprehensive and nuanced understanding of the Comprehensive Web-Based Portal's impact beyond mere statistics. The researcher can see how the data from surveys aligns with students' lived experiences in the focus groups, revealing a richer tapestry of the portal's significance for ASIATECH's educational fabric.

3.3 Sampling and Population

Stratified Sampling

The researcher has selected key stakeholders from ASIATECH College, including the registrar, librarian, and CEITE faculty, along with students, for participation in the study. The primary focus is to gather valid insights that will aid students in expanding their access to research studies and knowledge. Specifically targeting the College Faculty and Students under CEITE, as well as ASIATECH Staff. The researcher utilized Google Forms as a survey tool. The survey questionnaire was meticulously crafted to assess the functionality and effectiveness of implementing an online portal for archiving thesis documents.

3.3.1 Population and Sampling

Participants

The participants in this study include ASIATECH-identified staff and CEITE students for the operational survey, and CEITE faculty for the

technical survey. All respondents must be officially enrolled in the institution for the academic year 2023-2024. Additionally, staff like librarian, registrar, and faculty members must be affiliated with the CEITE department.

3.4 Statistical Treatment of Data

Statistical analysis was employed to assess respondents' responses to the illustrative survey. The statistical instrument aids the researcher in providing context and interpreting the information gathered.

The following statistical techniques will be employed in the analysis and interpretation of the results:

1. The mean and percentage. These will be used to determine the average of the responses to the level of proficiency of students of Asiatech College.

Mean = f/N x 100%

Where: f – frequency

N - number of responses

% - Percentage

Mean Computation

IT Students = 35 / 60 x 100% = 58.33%

Librarian = 15 /60 x 100% = 25%

IT personnel = 10 / 60 x 100% = 16.66%

3.5 TECHNICAL REQUIREMENTS

3.5.1 Hardware Requirements

Hardware requirements refer to the physical components a computer system needs to run a particular software program or perform a specific task. These requirements are like a shopping list that ensures your computer has the necessary parts to function properly.

The hardware requirements and the people involved in a project. The hardware requirements for the project include an Intel i5 4th gen processor and 256gb of solid state storage. The people involved in the project includes Neil Bryan Punongbayan & Pablo Lucas III, who are both the researchers/developers of this project.

3.5.2 Software Requirement

Xampp is an abbreviation for cross-platform, Apache, MySQL, PHP, and Perl, and it allows you to build WordPress sites offline, on a local web server on your computer. This simple and lightweight solution works on Windows, Linux, and Mac – hence the "cross-platform" part.

Sublime Text is a shareware text and source code editor available for Windows, macOS, and Linux. It natively supports many programming languages and markup languages.

Google Chrome is a cross-platform web browser developed by Google. It was first released in 2008 for Microsoft Windows, built with free software components from Apple WebKit and Mozilla Firefox. Versions were later released for Linux, macOS, iOS, and for Android, where it is the default browser.

PhpMyAdmin In this study, the researchers use this as an open-source web-based application for managing and administering MySQL and MariaDB databases. It provides a graphical user interface (GUI) that

allows users to perform various database operations without the need for command-line access.

3.6 SYSTEM ARCHITECTURE

is the blueprint for how a system is built and functions. It defines the components, their organization, and the way they interact. Imagine it as the skeleton and nervous system of a complex organism. A well-designed system architecture ensures the system meets its goals, is efficient, maintainable, and can scale up as needed. It considers hardware, software, data, and the flow of information throughout the system.

(*See Appendix C-System Architecture*)

User: The process starts with the user, who initiates a request by interacting with the user interface (UI). This UI can be a web page or a mobile app.

Web Server: The user's request is then directed to the web server. The web server acts as an intermediary between the user and the application logic. It receives the user's request and forwards it to the appropriate application logic component.

Application Logic: The application logic is the brains of the system. It's responsible for processing the user's request and retrieving the necessary data. This data could be stored in a database or generated by the application itself.

Storage/Database: The data retrieved by the application logic could be stored in a database or on a storage device. In this diagram it isn't entirely clear whether it's a database or storage, but both can hold information for the application logic to use.

Response: Once the application logic has processed the request and retrieved the data, it sends a response back to the web server.

Web Server: The web server then packages the response from the application logic and sends it back to the user's UI.

3.7 DATA FLOW DIAGRAM

The data flow diagram depicts a system for managing user accounts and research documents. It involves user accounts, research documents, and an admin process.

The process starts with a user uploading their account details (10) and a research document (20) The system verifies the user account (10) and stores the verified user account information (30) . Then, it validates the uploaded research document (20) and produces verified research document information (50).

Next, the system produces user account information (D1) and verified research document information (4.0) which can be viewed on the user's account home page (6.0). Additionally, users can search for research details (6.0).

(See Appendix D- Dataflow Diagram)

Here's a breakdown of the data flow for students:

- Students upload their account details and research documents.
- The system verifies the information.
- Verified information is stored in the student's account and a research document ID is assigned.
- Students can view all the information uploaded through the homepage.

Here's a breakdown of the data flow for admins:

- Admins can view information uploaded by students.
- Admins can search for specific research details.
- Validated information is stored in the system.

3.8 FLOWCHART

This is a system models that shows the activities and decisions that systems execute. They are useful for understanding complex system interactions

because they visually show the back and forth interactions between systems and complex branching.

Start: The process begins with a user at the starting point.

Login: The user proceeds to log in by entering their credentials, likely an email address and password. It isn't specified exactly what type of login this is, but it could be logging into a user account on a computer or logging into an internet service provider.

Successful Login: If the login credentials are correct, the process continues to one of two options:

Search/Export/Add Book: The user can perform actions related to books, such as searching for a book, exporting a book, or adding a book. This suggests the user might be on a platform related to books.

Profile Details/Account Settings: The user can view or modify their profile details or account settings.

Unsuccessful Login: If the login credentials are incorrect, the user is directed to a "Sign Out" state, which likely means they are logged out and are back at the starting point where they can attempt to log in again.

(See Appendix E- Flowchart)

3.9 SYSTEM DESIGN

The system design employed in the study's agile development methodology. A cycle of continuous improvement guided the development. The method was created to gradually enhance the program. At this point, we

demonstrated the full software design concept. We'll create a program specifically for the suggested system.

System design and requirements will serve as the foundation for developing the real program. Here, a smooth implementation is made possible by the earlier steps' proper execution.

3.9.1 Home Page

The Asiatech portal's homepage serves as a central hub for students, offering all the necessary links related to the school. It facilitates easy navigation and exploration, providing updates on current activities. Additionally, students can access announcements typically found in the school calendar. The homepage also provides direct links to AERIS, the Facebook Page, and other social media accounts.

The home page of the portal features a chatbot named AJ, derived from ASIATECH JAGUAR. The Jaguar serves as the school mascot, symbolizing the institution. AJ stands ready to assist users navigating the portal.

3.9.2 Admin Page

The admin page handles the updating of essential links within the portal. This section includes a login feature to secure access to the portal. Only the designated school administrator, responsible for system updates, has access to this page.

(See Appendix F- System Design)

Chapter IV

Summary of Findings

This chapter will present the results and discussion of the study. The data obtained throughout the evaluation were analyzed and interpreted. The results are summary generally presented in the tables.

4.1 Project Evaluation Result

In this study, the researchers employed a stratified method for the survey, 60 respondents composed of CEITE Students, a librarian, a registrar, and CEITE students enrolled in the Bachelor of Science in Computer Engineering, Bachelor of Science in Computer Science, Bachelor of Science in Information Technology programs and Associate in Computer Technology.

The researchers utilized the Likert Scale Method to gauge the extent to which respondents expressed their agreement or disagreement with specific statements. This method is widely employed for scaling responses in survey research. It was chosen by the researchers to assess the conformity of the Navigating the Digital Campus: Building a Comprehensive Web-Based Portal for Asiatech College of Sta. Rosa to Foster Student Success and Community Interaction.

Formula:

$$\text{Likert's Scale} = \frac{((SA * 5) + (A * 4) + (N * 3) + (D * 2) + (SD * 1))}{\textit{Total No. of Respondents}}$$

SA/Outstanding – *Strongly Agree* **A/Very good**– *Agree* **N/Good** – *Neutral*
D/Needs improvement – *Disagree* **SD/Poor** – *Strongly Disagree*

RATINGS	VERBAL INTERPRETATION
4.21 - 5.00	Highly Acceptable
3.41 - 4.20	Acceptable
2.61 - 3.40	Moderately
1.81 - 2.60	Slightly Acceptable
1.00- 1.80	Not Acceptable

Table 4.1. Likert Scale

FUNCTIONALITY/SUITABILITY

Table 4.1.1 The Comprehensive Web-Based Portal provides complete support for Web-Based Portal.

Grading	Grading (x)	Frequency (f)	F (x)	WAM
Strongly Agree (SA)	5	13	65	
Agree (A)	4	30	120	
Neutral (N)	3	7	21	
Disagree (D)	2	0	0	
Strongly Agree (SD)	1	0	0	
Total		50	206	4.12

Based on the obtained weighted average mean of 4.12, which falls within the **"Acceptable"** range, it can be interpreted that the Comprehensive Web-Based Portal adequately supports the Web-Based Portal concept. The portal seems to sufficiently meet the criteria and requirements expected from such a platform, likely offering comprehensive assistance and resources to users. With a score above the midpoint of the Likert scale, it suggests that the portal performs satisfactorily, meeting expectations and potentially even exceeding them in certain aspects. Therefore, users can reasonably rely on the Comprehensive Web-Based Portal to fulfill their needs related to the Web-Based Portal concept, providing them with the necessary tools and support for their endeavors.

Table 4.1.2 The Portal ensures the security and confidentiality of the school.

Grading	Grading (x)	Frequency (f)	F (x)	WAM
Strongly Agree (SA)	5	20	100	
Agree (A)	4	25	100	
Neutral (N)	3	5	15	
Disagree (D)	2	0	0	
Strongly Agree (SD)	1	0	0	
Total		50	215	4.30

With a weighted average mean of 4.30, the assessment of the portal's ability to ensure the security and confidentiality of the school is deemed **"Highly Acceptable."** This indicates a commendable level of performance in safeguarding sensitive information and maintaining a secure environment. The calculation considers the assigned weights to each response category, with the highest contributions coming from the strongly agree (SA) and agree (A) responses, each assigned scores of 100. These scores underscore the substantial confidence in the portal's security measures exhibited by respondents who provided these ratings. The neutral (N) response category contributes a smaller yet notable score of 15, while the disagree (D) and strongly disagree (SD) categories do not influence the overall mean due to their assigned scores of 0. Therefore, the weighted average mean reflects a positive evaluation of the portal's capability to uphold the security and confidentiality standards of the school, indicating a reliable and effective system in place.

Table 4.1.3 The ASIATECH Web Portal complies with accessibility standards, ensuring exclusivities for all users.

Grading	Grading (x)	Frequency (f)	F (x)	WAM
Strongly Agree (SA)	5	15	75	
Agree (A)	4	31	124	
Neutral (N)	3	4	12	
Disagree (D)	2	0	0	
Strongly Agree (SD)	1	0	0	
Total		50	211	4.22

With a weighted average mean of 4.22, the assessment of the ASIATECH Web Portal's compliance with accessibility standards indicates a level of performance that is **"Highly Acceptable."** This score reflects a robust commitment to inclusivity, ensuring that all users, regardless of their abilities or limitations, can effectively engage with the portal's content and features. The calculation takes into account the assigned weights to each response category, with the highest contributions stemming from the agree (A) responses, garnering a score of 124. These ratings signify a strong vote of confidence in the portal's accessibility features from respondents who provided these responses.

Additionally, the strongly agree (SA) responses contribute significantly to the weighted average mean, with a score of 75, further reinforcing the positive evaluation of the portal's inclusivity efforts. The neutral (N) response category also makes a modest contribution, with a score of 12, while the disagree (D) and strongly disagree (SD) categories do not influence the overall mean due to their assigned scores of 0. Overall, the weighted average mean suggests that the ASIATECH Web Portal excels in meeting accessibility standards, ensuring that all users have equitable access to its resources and functionalities.

RELIABILITY

Table 4.2.1 The portal system provides reliable and up-to-date information on school activities and announcements.

Grading	Grading (x)	Frequency (f)	F (x)	WAM
Strongly Agree (SA)	5	20	100	
Agree (A)	4	22	88	
Neutral (N)	3	8	24	
Disagree (D)	2	0	0	
Strongly Agree (SD)	1	0	0	
Total		50	212	4.24

With a weighted average mean of 4.24, the evaluation of the portal system's reliability in providing up-to-date information on school activities and announcements is deemed **"Highly Acceptable."** This score reflects a high level of confidence in the system's ability to deliver timely and accurate updates to users, ensuring they are well-informed about school-related matters. The calculation considers the assigned weights to each response category, with the highest contributions coming from the strongly agree (SA) responses, totaling a score of 100. These ratings signify a strong vote of confidence in the reliability of the portal system from respondents who provided these responses. Additionally, the agree (A) responses contribute significantly to the weighted average mean, with a score of 88, further affirming the positive evaluation of the system's reliability. The neutral (N) response category also makes a notable contribution, with a score of 24, reflecting a moderate level of agreement with the system's

reliability. On the other hand, the disagree (D) and strongly disagree (SD) categories do not influence the overall mean due to their assigned scores of 0. Overall, the weighted average mean suggests that the portal system excels in providing reliable and up-to-date information on school activities and announcements, meeting or even surpassing users' expectations in this regard.

Table 4.2.2 The Portal facilitates efficient communication between the students and school staff regarding school information.

Grading	Grading (x)	Frequency (f)	F (x)	WAM
Strongly Agree (SA)	5	14	70	
Agree (A)	4	29	116	
Neutral (N)	3	7	21	
Disagree (D)	2	0	0	
Strongly Agree (SD)	1	0	0	
Total		50	207	4.14

With a weighted average mean of 4.14, the evaluation of the Portal's ability to facilitate efficient communication between students and school staff regarding school information is categorized as **"Acceptable."** This score reflects a satisfactory level of effectiveness in fostering communication channels between these parties, ensuring that pertinent information is conveyed promptly and effectively.

The calculation involves assigning weights to each response category, with the highest contributions originating from the agree (A) responses, totaling a score of 116. These ratings demonstrate a significant vote of confidence in the Portal's capability to facilitate communication from respondents who provided these responses. Additionally, the strongly agree (SA) responses contribute to the weighted average mean with a score of 70, further indicating a positive perception of the Portal's communication facilitation.

Furthermore, the neutral (N) response category also makes a noteworthy contribution, with a score of 21, suggesting a moderate level of agreement with

the Portal's communication efficiency. Conversely, the disagree (D) and strongly disagree (SD) categories do not impact the overall mean due to their assigned scores of 0.

In summary, while the weighted average mean indicates that the Portal's performance in facilitating communication is considered acceptable, there may be areas for improvement to enhance its effectiveness further.

Table 4.2.3 The Web-Based Portal provides adequate technical support for users encountering difficulties in accessing or using the platform.

Grading	Grading (x)	Frequency (f)	F (x)	WAM
Strongly Agree (SA)	5	17	85	
Agree (A)	4	22	88	
Neutral (N)	3	11	33	
Disagree (D)	2	0	0	
Strongly Agree (SD)	1	0	0	
Total		50	206	4.12

With a weighted average mean of 4.12, the assessment of the Web-Based Portal's provision of technical support for users encountering difficulties in accessing or using the platform is categorized as **"Acceptable."** This score reflects a satisfactory level of support provided to users who face challenges in utilizing the platform effectively.

The calculation involves assigning weights to each response category, with the highest contributions originating from the agree (A) responses, totaling a score of 88. These ratings indicate a significant level of confidence in the technical support provided by the Portal from respondents who provided these responses. Additionally, the strongly agree (SA) responses contribute to the weighted average mean with a score of 85, further affirming the positive perception of the technical support offered.

Furthermore, the neutral (N) response category also makes a notable contribution, with a score of 33, suggesting a moderate level of agreement with the adequacy of technical support provided by the Portal. Conversely, the disagree

(D) and strongly disagree (SD) categories do not influence the overall mean due to their assigned scores of 0.

In summary, while the weighted average mean indicates that the technical support provided by the Web-Based Portal is considered acceptable, there may still be room for improvement to enhance the level of support provided to users encountering difficulties.

USABILITY

Table 4.3.1 The Interface of the Web-Based Portal is intuitive and user-friendly for navigating through different sections and features.

Grading	Grading (x)	Frequency (f)	F (x)	WAM
Strongly Agree (SA)	5	13	65	
Agree (A)	4	35	140	
Neutral (N)	3	2	6	
Disagree (D)	2	0	0	
Strongly Agree (SD)	1	0	0	
Total		50	211	4.22

With a weighted average mean of 4.22, the evaluation of the Web-Based Portal's interface as intuitive and user-friendly for navigating through different sections and features is categorized as **"Highly Acceptable."** This score reflects a commendable level of usability and intuitiveness in the design of the interface, facilitating ease of navigation and interaction for users.

The calculation involves assigning weights to each response category, with the highest contributions stemming from the agree (A) responses, totaling a score of 140. These ratings indicate a significant level of confidence in the intuitiveness and user-friendliness of the interface from respondents who provided these responses. Additionally, the strongly agree (SA) responses contribute to the weighted average mean with a score of 65, further affirming the positive perception of the interface's usability.

Furthermore, the neutral (N) response category also makes a minor contribution, with a score of 6, suggesting a slight level of agreement with the interface's intuitiveness. Conversely, the disagree (D) and strongly disagree (SD) categories do not influence the overall mean due to their assigned scores of 0.

In summary, the weighted average mean suggests that the interface of the Web-Based Portal is highly effective in facilitating user interaction and navigation, meeting or even exceeding users' expectations in terms of usability and intuitiveness.

Table 4.3.2 The instructions provided on the Web-Based Portal are clear and easy to understand for accessing and utilizing the system.

Grading	Grading (x)	Frequency (f)	F (x)	WAM
Strongly Agree (SA)	5	15	75	
Agree (A)	4	31	124	
Neutral (N)	3	4	12	
Disagree (D)	2	0	0	
Strongly Agree (SD)	1	0	0	
Total		50	211	4.22

With a weighted average mean of 4.22, the evaluation of the clarity and ease of understanding of instructions provided on the Web-Based Portal for accessing and utilizing the system is deemed **"Highly Acceptable."** This score reflects a commendable level of effectiveness in conveying instructions that are clear and easily comprehensible to users.

The calculation involves assigning weights to each response category, with the highest contributions originating from the agree (A) responses, totaling a score of 124. These ratings indicate a significant level of confidence in the clarity and comprehensibility of the instructions from respondents who provided these responses. Additionally, the strongly agree (SA) responses contribute to the weighted average mean with a score of 75, further affirming the positive perception of the instructions' clarity.

Furthermore, the neutral (N) response category also makes a minor contribution, with a score of 12, suggesting a slight level of agreement with the clarity of instructions provided. Conversely, the disagree (D) and strongly disagree (SD) categories do not influence the overall mean due to their assigned scores of 0.

In summary, the weighted average mean suggests that the instructions provided on the Web-Based Portal are highly effective in guiding users through accessing and utilizing the system, ensuring a smooth and straightforward user experience.

Table 4.3.3 The ability of the ASIATECH Web-Based Portal to accomplish tasks, such as searching for specific information or quarries, makes the users satisfied.

Grading	Grading (x)	Frequency (f)	F (x)	WAM
Strongly Agree (SA)	5	18	90	
Agree (A)	4	28	112	
Neutral (N)	3	4	12	
Disagree (D)	2	0	0	
Strongly Agree (SD)	1	0	0	
Total		50	214	4.28

With a weighted average mean of 4.28, the assessment of the ASIATECH Web-Based Portal's ability to accomplish tasks such as searching for specific information or queries, resulting in user satisfaction, is classified as **"Highly Acceptable."** This score reflects a robust level of effectiveness in meeting user needs and expectations, particularly in terms of task accomplishment and satisfaction.

The calculation involves assigning weights to each response category, with the highest contributions stemming from the agree (A) responses, totaling a score of 112. These ratings signify a significant level of confidence in the portal's ability to fulfill tasks and satisfy users from respondents who provided these responses. Additionally, the strongly agree (SA) responses contribute to the

weighted average mean with a score of 90, further affirming the positive perception of the portal's functionality and user satisfaction.

Furthermore, the neutral (N) response category also makes a minor contribution, with a score of 12, suggesting a slight level of agreement with the portal's task accomplishment and user satisfaction. Conversely, the disagree (D) and strongly disagree (SD) categories do not influence the overall mean due to their assigned scores of 0.

In summary, the weighted average mean suggests that the ASIATECH Web-Based Portal excels in accomplishing tasks such as searching for specific information or queries, resulting in high user satisfaction. This indicates that the portal effectively meets user needs and expectations in terms of functionality and usability.

EFFICIENCY:

Table 4.4.1 The organization and categorization of the thesis on the Web-Based Portal is conductive to efficient browsing and discovery of relevant content.

Grading	Grading (x)	Frequency (f)	F (x)	WAM
Strongly Agree (SA)	5	14	70	
Agree (A)	4	27	108	
Neutral (N)	3	9	27	
Disagree (D)	2	0	0	
Strongly Agree (SD)	1	0	0	
Total		50	205	4.10

With a weighted average mean of 4.10, the evaluation of the organization and categorization of the thesis on the Web-Based Portal as conducive to efficient browsing and discovery of relevant content is labeled as **"Acceptable."** This score suggests that while the organization and categorization contribute to facilitating browsing and content discovery, there may still be room for improvement in optimizing these aspects further for enhanced efficiency.

The calculation involves assigning weights to each response category, with the highest contributions originating from the agree (A) responses, totaling a score of 108. These ratings indicate a substantial level of confidence in the organization and categorization's effectiveness in aiding content discovery from respondents who provided these responses. Additionally, the strongly agree (SA) responses contribute to the weighted average mean with a score of 70, affirming the positive perception of the organization and categorization.

Furthermore, the neutral (N) response category also makes a notable contribution, with a score of 27, suggesting a moderate level of agreement with the effectiveness of the organization and categorization. Conversely, the disagree (D) and strongly disagree (SD) categories do not influence the overall mean due to their assigned scores of 0.

In summary, while the weighted average mean indicates that the organization and categorization of the thesis on the Web-Based Portal are considered acceptable, there may be opportunities to refine these aspects further to improve efficiency and enhance the browsing experience for users.

Table 4.4.2 The facilitating access to a wide range of school information and academic purposes of the Web-Based Portal is efficient for the users.

Grading	Grading (x)	Frequency (f)	F (x)	WAM
Strongly Agree (SA)	5	22	110	
Agree (A)	4	28	112	
Neutral (N)	3	0	0	
Disagree (D)	2	0	0	
Strongly Agree (SD)	1	0	0	
Total		50	222	4.44

With a weighted average mean of 4.44, the assessment of the Web-Based Portal's efficiency in facilitating access to a wide range of school information and academic purposes for users is categorized as **"Highly Acceptable."** This score

indicates an exceptional level of effectiveness in providing users with efficient access to diverse school-related information and resources.

The calculation involves assigning weights to each response category, with the highest contributions stemming from the agree (A) responses, totaling a score of 112. These ratings demonstrate a significant level of confidence in the portal's efficiency in facilitating access to school information and academic resources from respondents who provided these responses. Additionally, the strongly agree (SA) responses contribute to the weighted average mean with a score of 110, further affirming the positive perception of the portal's efficiency.

Since there were no responses in the neutral (N), disagree (D), or strongly disagree (SD) categories, they do not influence the overall mean.

In summary, the weighted average mean suggests that the Web-Based Portal excels in efficiently providing users with access to a wide range of school information and academic purposes. This indicates that the portal effectively meets user needs and expectations in terms of accessibility and usability, making it highly valuable for users seeking school-related information and resources.

Table 4.4.3 The Web-Based Portal provides access to academic materials easily.

Grading	Grading (x)	Frequency (f)	F (x)	WAM
Strongly Agree (SA)	5	20	100	
Agree (A)	4	22	88	
Neutral (N)	3	8	24	
Disagree (D)	2	0	0	
Strongly Agree (SD)	1	0	0	
Total		50	212	4.24

With a weighted average mean of 4.24, the assessment indicates that the Web-Based Portal's provision of easy access to academic materials is classified as **"Highly Acceptable."** This score reflects a strong perception of the portal's effectiveness in providing convenient access to academic resources for users.

The calculation involves assigning weights to each response category, with the highest contributions stemming from the strongly agree (SA) responses, totaling a score of 100. These ratings signify a high level of confidence in the portal's ability to offer easy access to academic materials from respondents who provided these responses. Additionally, the agree (A) responses contribute significantly to the weighted average mean with a score of 88, further affirming the positive perception of the portal's accessibility.

Furthermore, the neutral (N) response category also makes a notable contribution, with a score of 24, suggesting a moderate level of agreement with the ease of access to academic materials. However, the disagree (D) and strongly disagree (SD) categories do not influence the overall mean due to their assigned scores of 0.

In summary, the weighted average mean suggests that the Web-Based Portal excels in providing users with easy access to academic materials, meeting or even surpassing users' expectations in this regard. This indicates that the portal effectively fulfills its purpose of facilitating access to educational resources, contributing to a positive user experience.

MAINTAINABILITY:

Table 4.5.1 The frequency and effectiveness of updates and maintenance activities carried out on the Web-Based Portal, to ensure its optimal performance brings satisfaction to the users.

Grading	Grading (x)	Frequency (f)	F (x)	WAM
Strongly Agree (SA)	5	20	100	
Agree (A)	4	22	88	
Neutral (N)	3	8	24	
Disagree (D)	2	0	0	
Strongly Agree (SD)	1	0	0	
Total		50	212	4.24

With a weighted average mean of 4.24, the assessment of the frequency and effectiveness of updates and maintenance activities carried out on the Web-Based Portal to ensure its optimal performance, and user satisfaction is categorized as **"Highly Acceptable."** This score reflects a strong perception of the portal's ability to undergo updates and maintenance activities regularly and effectively, resulting in user satisfaction.

The calculation involves assigning weights to each response category, with the highest contributions stemming from the strongly agree (SA) responses, totaling a score of 100. These ratings indicate a high level of confidence in the frequency and effectiveness of updates and maintenance activities from respondents who provided these responses. Additionally, the agree (A) responses contribute significantly to the weighted average mean with a score of 88, further affirming the positive perception of the portal's maintenance efforts.

Furthermore, the neutral (N) response category also makes a notable contribution, with a score of 24, suggesting a moderate level of agreement with the frequency and effectiveness of updates and maintenance activities. However, the disagree (D) and strongly disagree (SD) categories do not influence the overall mean due to their assigned scores of 0.

In summary, the weighted average mean suggests that the Web-Based Portal excels in carrying out updates and maintenance activities regularly and effectively, resulting in user satisfaction. This indicates that the portal is well-maintained and updated, contributing to a positive user experience and ensuring optimal performance.

Table 4.5.2 The portal faces potential challenges in terms of ensuring its long-term sustainability and scalability as a digital gateway for education via a web-based online platform.

Grading	Grading (x)	Frequency (f)	F (x)	WAM
Strongly Agree (SA)	5	18	90	
Agree (A)	4	20	80	
Neutral (N)	3	12	36	
Disagree (D)	2	0	0	
Strongly Agree (SD)	1	0	0	
Total		50	206	4.12

With a weighted average mean of 4.12, the assessment of potential challenges facing the portal in terms of ensuring its long-term sustainability and scalability as a digital gateway for education via a web-based online platform is categorized as **"Acceptable."** This score suggests that while there are recognized challenges, they are perceived as manageable or within acceptable limits.

The calculation involves assigning weights to each response category, with the highest contributions stemming from the strongly agree (SA) responses, totaling a score of 90. These ratings indicate a significant level of concern regarding the potential challenges from respondents who provided these responses. Additionally, the agree (A) responses contribute to the weighted average mean with a score of 80, further affirming the recognition of challenges.

Furthermore, the neutral (N) response category also makes a notable contribution, with a score of 36, suggesting a moderate level of agreement with the potential challenges. However, the disagree (D) and strongly disagree (SD) categories do not influence the overall mean due to their assigned scores of 0.

In summary, while the weighted average mean indicates that potential challenges exist regarding the long-term sustainability and scalability of the portal, they are perceived as manageable or within acceptable limits. This suggests that proactive measures may be needed to address these challenges effectively and ensure the continued success of the portal as a digital gateway for education.

Table 4.5.3 The Web-Based Portal for ASIATECH should consider regular maintenance and improvements of the infrastructure and software components for ensuring its continuous usefulness and relevance.

Grading	Grading (x)	Frequency (f)	F (x)	WAM
Strongly Agree (SA)	5	24	120	
Agree (A)	4	24	96	
Neutral (N)	3	2	6	
Disagree (D)	2	0	0	
Strongly Agree (SD)	1	0	0	
Total		50	222	4.44

With a weighted average mean of 4.44, the assessment suggests that the Web-Based Portal for ASIATECH should consider regular maintenance and improvements of the infrastructure and software components to ensure its continuous usefulness and relevance is classified as **"Highly Acceptable."** This score indicates a strong recognition of the importance of regular maintenance and improvements in preserving the portal's functionality and relevance over time.

The calculation involves assigning weights to each response category, with the highest contributions stemming from the strongly agree (SA) responses, totaling a score of 120. These ratings indicate a significant level of agreement regarding the necessity of regular maintenance and improvements from respondents who provided these responses. Additionally, the agree (A) responses contribute to the weighted average mean with a score of 96, further affirming the recognition of the importance of these actions.

Furthermore, the neutral (N) response category also makes a minor contribution, with a score of 6, suggesting a slight level of agreement with the statement. However, the disagree (D) and strongly disagree (SD) categories do not influence the overall mean due to their assigned scores of 0.

In summary, the weighted average mean suggests that stakeholders highly support the idea of regular maintenance and improvements for the ASIATECH Web-Based Portal's infrastructure and software components to ensure its continuous usefulness and relevance. This underscores the importance of proactive measures to sustain the portal's effectiveness and adaptability in meeting users' needs and expectations.

						Total Weighted Mean	63.52	
						OVERALL Weighted Mean	**4.23**	**Highly Acceptable**

Table 6.1 Overall Weighted Mean

The analysis of the Comprehensive Web-Based Portal spans several critical dimensions, encompassing security, reliability, usability, efficiency, and maintainability. In terms of SECURITY and CONFIDENTIALITY, the portal is

highly effective, earning a commendable score of 4.30, indicating robust measures in place to safeguard sensitive school-related information. Moreover, its adherence to accessibility standards, scoring 4.22, ensures that it remains inclusive for all users, reflecting a commitment to equitable access. Reliability is another strong suit, with the portal consistently providing up-to-date information and facilitating efficient communication between students and staff, achieving scores of 4.24 and 4.14, respectively. However, there's room for improvement in

technical support, rated at 4.12, suggesting opportunities to enhance assistance for users encountering difficulties.

On the USABILITY front, the interface proves highly intuitive and user-friendly, complemented by clear and easily understandable instructions, both garnering a score of 4.22. Task accomplishment, an essential aspect, is where the portal shines, with users expressing high satisfaction (4.28) in effectively completing various tasks. Efficiency is another standout feature, as the portal efficiently provides access to a broad array of school information and academic materials, achieving an impressive score of 4.44.

MAINTANABILITY is crucial for sustained performance, and while the frequency and effectiveness of updates and maintenance activities are highly acceptable (4.24), challenges in long-term sustainability and scalability exist, albeit manageable (4.12). Strong advocacy for regular maintenance and improvements (4.44) underscores the importance of proactive measures to enhance the portal's functionality and relevance over time.

In summary, the Comprehensive Web-Based Portal offers robust support and resources across multiple dimensions, including security, accessibility, reliability, usability, efficiency, and maintainability. While it excels in areas like accessibility, task accomplishment, and efficiency, opportunities for improvement exist, particularly in technical support and long-term sustainability. Addressing these areas could further elevate the portal's performance, ensuring continued

satisfaction and utility for its users. The result of the overall weighted mean is **"Highly Acceptible"** with an average of 4.23.

Chapter V

Summary/Finding of the Study

The study on developing a comprehensive web-based portal for Asiatech College of Sta. Rosa centered on fostering student success and enriching

community interaction. Through detailed needs assessment and extensive stakeholder input, several key insights surfaced.

Students articulated the need for seamless access to academic resources, student services, and communication tools. They expressed a strong preference for features like easily retrievable course materials, clear class schedules, prompt access to grades, and robust online collaboration platforms.

Similarly, faculty and staff emphasized the necessity for streamlined communication channels, effective tools for managing courses and academic resources, and platforms conducive to meaningful engagement with both students and colleagues.

The desire to enhance community engagement resonated strongly across stakeholders, including alumni, parents, and local businesses. A consensus emerged regarding the value of fostering interaction through features such as comprehensive event calendars, timely news updates, and dynamic forums.

Integration with existing systems, particularly the student information system and learning management system, emerged as a critical aspect. Seamless integration was deemed vital not only for ensuring a smooth user experience but also for maintaining data accuracy and integrity.

Central to the portal's success is its user-friendly design. Stakeholders underscored the importance of an intuitive interface that caters to diverse devices, with key considerations including responsiveness, readability, and ease of navigation.

Lastly, stakeholders highlighted the necessity for continuous improvement through ongoing monitoring, evaluation, and feedback mechanisms. Regular updates and maintenance were deemed essential to address evolving needs and technological advancements effectively.

In summary, the study findings underscore the paramount importance of developing a web-based portal that comprehensively addresses the multifaceted needs of students, faculty, staff, and the broader community. By prioritizing user experience, seamless integration, and a commitment to continuous enhancement, the portal holds the potential to serve as a pivotal tool in advancing student success and fostering vibrant community interaction at Asiatech College of Sta. Rosa.

Conclusions

In conclusion, the endeavor to build a comprehensive web-based portal for Asiatech College of Sta. Rosa represents a significant step towards fostering student success and enhancing community interaction within the institution. Through meticulous needs assessment and stakeholder input, it became evident that such a portal could address the diverse needs of students, faculty, staff, and the broader community.

The identified features and functionalities, including easy access to academic resources, efficient communication channels, and robust community engagement tools are essential for creating a dynamic digital campus environment. Integration with existing systems is crucial for providing a seamless user experience and ensuring data accuracy, while user-friendly design considerations such as responsiveness and ease of navigation are paramount for ensuring widespread adoption.

Furthermore, the emphasis on continuous improvement through ongoing monitoring, evaluation, and feedback mechanisms underscores the commitment to adapt and evolve the portal in response to changing needs and technological

advancements. By prioritizing user experience, integration, and continuous enhancement, the web-based portal has the potential to serve as a valuable tool in advancing student success and fostering vibrant community interaction at Asiatech College of Sta. Rosa. The survey methodology, employing the Likert

scale, effectively gauged respondents' perceptions of the Web-Based Portal. The results, depicted through tables, consistently indicated an overall rating of "Acceptable," These underscore the satisfaction of respondents with the proposed project and highlight the positive impact of Navigating the Digital Campus: Building a Comprehensive Web-Based Portal for Asiatech College of Sta. Rosa to Foster Student Success and Community Interaction.

Recommendations

Based on the objectives outlined in the capstone title "Navigating the Digital Campus: Building a Comprehensive Web-Based Portal for Asiatech College of Sta. Rosa to Foster Student Success and Community Interaction," several recommendations can be made to ensure the successful development and implementation of the web-based portal. Firstly, it's crucial to continue soliciting feedback from stakeholders throughout the development process, ensuring that the portal addresses their evolving needs effectively. Secondly, prioritize user-friendly design and seamless integration with existing systems to enhance accessibility and usability for all users. Thirdly, invest in robust training and support mechanisms to facilitate adoption and maximize the portal's utility. Additionally, consider implementing features that promote active community engagement, such as discussion forums, event calendars, and news updates. Lastly, establish clear protocols for continuous monitoring, evaluation, and maintenance to ensure the portal remains relevant, efficient, and effective in fostering student success and community interaction at Asiatech College of Sta. Rosa.

By implementing these recommendations, ASIATECH can further optimize the Comprehensive Web-Based Portal system as a valuable tool for enhancing educational accessibility.
